

b. Importance of SEO (Search Engine Optimization)

Let's understand this with a simple story.

I planned to start a small café in my area. I created a website, but after some days I noticed that **no one was visiting my site**. Then I learned about SEO.

What is SEO?

SEO (Search Engine Optimization) is the process of improving a website so that it appears higher on search engines like Google.

After learning SEO, I optimized my website by adding proper keywords like **"best café near me"**, improving speed, and writing useful content.

Importance of SEO (from my experience)

1. Increases Website Traffic

When my website started appearing on top, more people clicked on it.

👉 More visibility = more visitors

2. Improves Visibility

Earlier, my café was unknown online.

After SEO, people started seeing my café whenever they searched related keywords.

3. Builds Trust and Credibility

I noticed that people trust websites that appear on the **first page of search results**.

👉 Higher rank = more trust

4. Cost-Effective Marketing

I didn't spend money on ads.

Still, customers were coming through search results.

👉 SEO saves money compared to paid ads

5. Better User Experience

While doing SEO, I improved my website speed, design, and content.

👉 Users found it easy and enjoyable to use

Example

When someone searches “**best café near me**”, and my café appears at the top on Google, they are more likely to visit my café.

Conclusion

From my experience, SEO is very important because it helps a business grow online by increasing visibility, building trust, and attracting customers without spending much money.
