

Hi, I'm Gaurav Dubey, currently pursuing a B.Tech in Computer Science. I'm interning with DevOps Insider, where I've developed hands-on skills in Linux, Azure, and Terraform. In Linux, I've learned to deploy Git repositories on servers and master essential commands. In Terraform, I create infrastructure as code, using key commands like init, validate, plan, and apply to deploy resources on Azure. I'm not only hardworking but also a keen listener and a confident communicator. I'm excited to keep growing in the DevOps field, and I appreciate the opportunity to share my journey!
